

E-Commerce Checkout Flow QA Summary Report

Objective

Perform end-to-end testing for the e-commerce checkout workflow and document functional, validation, responsive, and usability defects.

Scope

- Product listing and product details
- Cart add/update/remove behavior
- Coupon validation
- Checkout form validation
- Payment simulation
- Order confirmation
- Desktop and mobile responsiveness
- Basic accessibility checks

Environment

Browser coverage included Chrome, Edge, Safari, and mobile viewport simulation at 390px width. Test data included valid and invalid product/cart/checkout values.

Execution Summary

24 test cases were executed. 19 passed and 5 failed. No test cases were blocked. The pass rate is 79.17%.

Key Findings

- Core product selection and order confirmation flow works.
- Cart subtotal update requires improvement.
- Invalid phone number validation is missing.
- Mobile cart spacing needs correction.
- Accessibility focus visibility should be improved.

Final Recommendation

Ready with Minor Fixes. The application can proceed after high-priority cart total and checkout validation issues are fixed and re-tested.

Metric	Value	Status
Total Test Cases	24	Completed
Passed	19	Stable
Failed	5	Needs Fix
Blocked	0	None
Recommendation	Ready with Minor Fixes	Conditional Approval
